Sucden-O binds to the surface of ulcers (attaching to exposed proteins) and coats the ulcer, thus protecting the ulcer surface to some extent from further injury by acid and pepsin.

SUC

Sucden-O directly inhibits pepsin (an enzyme that breaks apart proteins) in the presence of stomach acid.

Sucden-O binds bile salts coming from the liver via the bile thus protecting the stomach lining from injury caused by the bile acids.

Sucden-O increase prostaglandin production, and prostaglandins are known to protect the lining of the stomach.
